Int Arch Otorhinolaryngol 2019;23:e253.

Following advances in electronic scientific communication, and with the aim to speed up the publication of articles, the International Archives of Otorhinolaryngology (IAO) has adopted the model of continuous publication. This new model enables the quick publication of articles; after approval and editorial production, the articles are automatically published online and made available in various databases (e.g. PubMed, SciELO, Scopus) without having to wait for the quarterly publication of the printed journal.<sup>1,2</sup>

International Archives of Otorhinolaryngology will continue to produce the printed edition periodically, with four issues per year (January, April, July, and October). However, in addition to this, the articles will be published and indexed in a continuous manner in the online databases, lending exposure and immediate access to these manuscripts. As such, we hope to retain the novelty of published works while broadening the exposure time of the research to increase the citations of articles, which will have a positive impact on the journal.<sup>1</sup>

Regarding continuous publication, the main changes are:

- Although the content of the online version and the printed version will be the same, the numerical sequence of the pages will be different.
- The articles will be published using electronic pagination (e-pagination) and listed in chronological sequence.

- The printed version will have the usual numbering of pages, but the official citation will be the DOI (Digital Object Identifier) and/or the e-pagination (e.g., Int Arch Otorhinolaryngol 2019;23:e1-e5).
- The official citation will be shown on the first page of the printed version of each article.

In addition, the IAO uses social networks to give exposure and encourage discussion of its manuscripts. In a world where people are increasingly connected, it is necessary to use these technologies to stimulate interest in academic and research matters. “Liking,” “commenting,” and “sharing” scientific discoveries on social network platforms also serves as a metric for the involvement of the reader with the article.

## Conflicts of Interest

The authors declare that there are no conflicts of interest.
