Introduction

The characteristic monocot pollen is uniaperturate, with a distal polar monosulcate aperture, the anasulcus. This anasulcate pollen grain is also found in primitive dicots. Evidence suggests that monosulcate is the most primitive pollen of angiosperms (Walker 1974).

Monocot pollen grains are uniaperturate or of uniaperturate-derivate type, only very rarely triaperturate (Cronquist 1981).

A considerable body of evidence, including pollen, indicates that monocots originated at a particularly early date and that their ancestors were among the most primitive monosulcate pollen dicots (Takhtajan 1969).

Cronquist (1981, p. 1033) noted, “The monocots are more primitive than the bulk of dicots in mostly having uniaperturate pollen, but several of the archaic families of dicots also have uniaperturate pollen, so there is no problem here. The fossil pollen record suggests that the origin of monocotyledons from primitive dicotyledons in Aptian-Albian was the first significant dichotomy in the evolutionary diversification of angiosperms.”

According to APG IV (Byng *et al.* 2016) and APP (Cole *et al.* 2017), the monosulcate pollen, along with other features, brings monocots closer to the most primitive group of dicots (ANA GRADE and MAGNOLIIDS), among which pollen of this type also predominates.

The other common aperture in monocot pollen is the ulcus (pore), which is found in the distal polar position, the ana-ulcerate grain. This circular uniaperturate-derived type is primitive, as indicated by its position at the distal pole.

The exine's resistance permits the preservation of many pollen types in appropriate sediments for qualitative and quantitative palynological analyses (Birks & Birks 1980; Birks & Gordon 1985; Berglund 1986). Pollen grains are thus excellent tools with which to reconstruct the paleoenvironment and can indicate the sequence of past environments over geological time.

The palynology of Quaternary sediments profiles, which aims to reconstitute the paleoenvironment of the last millennia in the Coastal Plain and the East Plateau of Rio Grande do Sul, was conducted at the Laboratory of Palynology, Department of Botany, Institute of Biosciences, Federal University of Rio Grande do Sul, UFRGS (Lorscheitter 1983; Lorscheitter & Romero 1985; Lorscheitter 1992, Roth & Lorscheitter 1993; Cordeiro & Lorscheitter 1994; Neves & Lorscheitter 1995; Lorscheitter 1997; Lorscheitter & Dillenburg 1998; Lorscheitter 2003; Leal & Lorscheitter 2007; Leonhardt & Lorscheitter 2010; Scherer & Lorscheitter 2014; Spalding & Lorscheitter 2015; Masetto & Lorscheitter 2019; Roth *et al.* 2021). A reference collection of pollen from Rio Grande do Sul's current flora was essential

to identify the spores and pollen preserved in these sediments. This collection was increased in accordance with the need to identify new palynomorphs to paleoenvironment analysis.

The present study's objective was to report a catalog of angiosperm pollen photomicrographs from this reference collection, to support palynological research, particularly in Southern Brazil. The findings obtained also permit palynological observations regarding some evolutionary aspects of angiosperms.

Methods

The reference pollen of the current monocots presented here for paleoenvironmental analyses was extracted from exsiccate held at the ICN (Instituto de Ciências Naturais) Herbarium, Department of Botany, Institute of Biosciences, UFRGS, which contains species from the flora of Rio Grande do Sul. Some taxa that are unrecorded in Rio Grande do Sul, but that occur in Brazil's southern region may be exceptionally included in the reference collection, to highlight a certain pollen characteristic, as in the case of the dicot *Xylopia grandiflora* A. St.-Hil. (Vol. 1, Lorscheitter & Santos 2023).

Despite being the main field indicator, the pollen of only one species of Poaceae was included in the reference collection owing to its considerable morphological uniformity, which generally permits identification of the family only.

All reference pollen material was collected directly from the herbarium exsiccate using a magnifying glass, and the sample (anthers) was placed in a 10 ml glass centrifuge tube. Information about the exsiccate was recorded in a book, including the respective species numbers of the reference pollen samples collected and the ICN herbarium. The samples were chemically processed by acetolysis (Faegri & Iversen 1975), and the material was subsequently filtered through 250 µm mesh. Five permanent slides were mounted in glycerol-jelly for each species (Salgado-Labouriau 1973; Faegri & Iversen 1975).

Light microscopy (DIAPLAN; Leitz, Wetzlar, Germany) was used for microscopic analyses and photomicrographs. The photomicrographs were taken with a digital camera (DFC295; Leica Microsystems, Wetzlar, Germany) connected to the microscope.

The polar axes and equatorial diameters of 25 grains were measured for each pollen species, and the average was used to obtain an approximate size. In grains that had two equatorial diameters, only the largest equatorial diameter was measured, and only the diameters of the spheroidal grains were measured. Measurements were always taken within 1 week after acetolysis owing to the tendency for the exine to increase over

time until the volume stabilized (Salgado-Labouriau 1973). This may explain why certain photomicrographs had larger pollen grain sizes than indicated in the averages, as they were taken after the respective measurements but preserved the original morphology.

The species were named following the Missouri Botanical Garden (MOBOT) nomenclature (2023), and pollen terminology was based on Punt *et al.* (2007). The general taxonomic ordering of the pollen material followed that of the Angiosperm Phylogeny Group version IV (APG IV; Byng *et al.* 2016) and took the form of a catalog of photomicrographs. The taxa sequence was the same as that in Angiosperm Phylogeny Poster (APP; Cole *et al.* 2017), according to APG IV. A band of the same color as the respective APP clade was placed along the margin of each page of the catalog.

Each pollen grain photomicrograph is accompanied by a legend detailing the name of the species, the registration numbers of the reference collection (left) and the ICN Herbarium, an equatorial or polar view of the grain and respective plane of focus, and the grain's shape to facilitate comparison. For aperturate pollen grains, the number, position, and characteristics of the apertures are indicated. The legends also include the type of ornamentation and the average pollen grain measurements in micrometers (P = polar axis, EQ = greatest equatorial diameter). In general, only the grain diameter measurement is indicated for spheroidal grains.

Characteristics of pollen grains

A substantial number of the 59 monocot species in the reference material have a polar axis smaller than the greatest equatorial diameter, oblate (in general) or peroblate grains, with an elongate latitudinal aperture at the distal pole in the form of a sulcus, monosulcate grain of anasulcate type (25 species). Monosulcate is the most primitive aperture found in angiosperm pollen (Walker 1974).

The abundant monosulcate pollen in the analyzed monocots is also common in primitive dicot species from the reference collection (Lorscheitter & Santos 2023), according to Takhtajan (1969) and Cronquist (1981), authors who suggest that the monocots may have originated from primitive monosulcate dicots. In APG IV (Byng *et al.* 2016) and APP (Cole *et al.* 2017) monosulcate pollen is also among the main characteristics of monocots and the primitive group of dicots.

The anasulcate pollen of the monocots examined were generally eureticulate (24 species), with a thick-to-fine reticulum. The elongate latitudinal aperture not situated at a pole, the sulculus in sulculate grains, occurred sporadically (four eureticulate species).

The circular aperture at the distal pole (primitive position), the ulcus, ana-ulcerate grains, also occurs in numerous analyzed monocot (22 species), generally scabrate (17 species) or rugulate (five species).

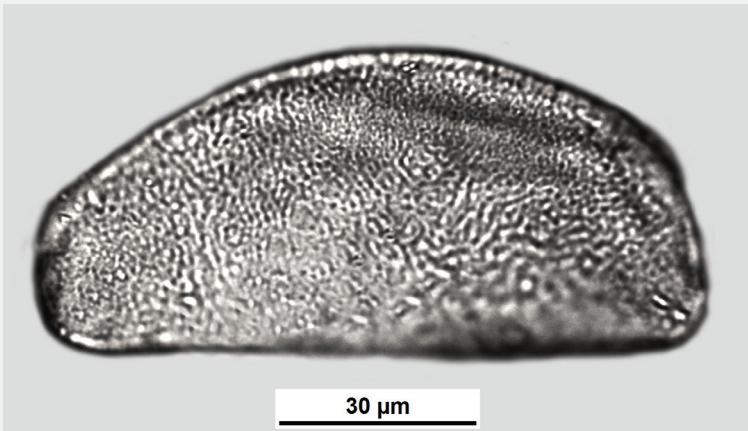

Spiraperturate microechinate pollen grains occurred sporadically (four species).

Rare grains granulate (two species) and psilate (three species) were found in the analysed material.

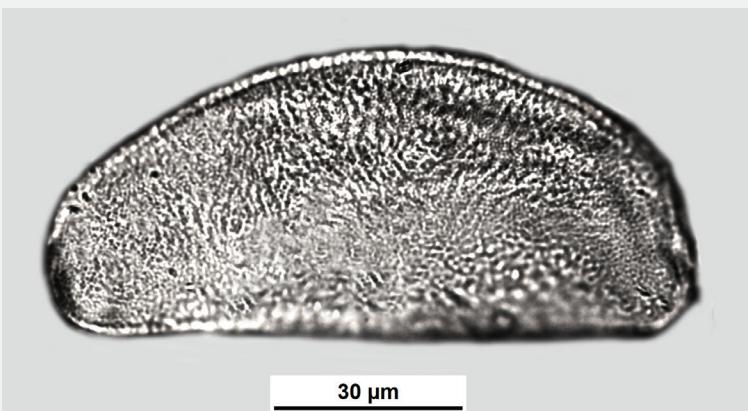

As in primitive dicots, the results confirm that pollen morphology can contribute to our understanding of monocot evolution.

The pages that follow present the catalog, which contains photomicrographs of the 59 species studied, according to the MONOCOTS in the APP sequence (Cole *et al.* 2017).

P $\bar{x} = 22 \mu\text{m}$ EQ $\bar{x} = 40 \mu\text{m}$

Arecaceae

Geonoma schottiana Mart.
794 – ICN 33860
Equatorial view
Peroblate - Anasulcate - Reticulate
 $P \bar{x} = 20 \mu m$ $EQ \bar{x} = 44 \mu m$

Syagrus romanzoffiana (Cham.) Glassman
1134 – ICN 63926
Equatorial view
Oblate - Anasulcate - Reticulate
 $P \bar{x} = 26 \mu m$ $EQ \bar{x} = 43 \mu m$

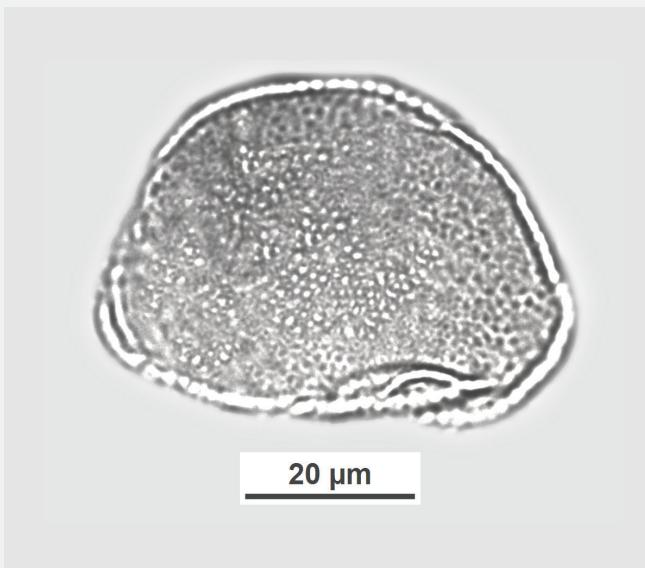

Syagrus romanzoffiana (Cham.) Glassman
1134 – ICN 63926
Polar view Distal face
Oblate - Anasulcate - Reticulate
 $P \bar{x} = 26 \mu m$ $EQ \bar{x} = 43 \mu m$

Bromeliaceae

Agalostachys antiacantha (Bertol.) Beer
562 – ICN 19342
Equatorial view: first plane
Oblate - Anasulcate - Reticulate
P \bar{x} = 53 µm EQ \bar{x} = 77 µm

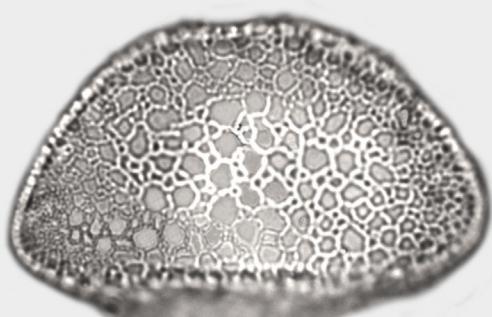

Agalostachys antiacantha (Bertol.) Beer
562 – ICN 19342
Equatorial view: second plane
Oblate - Anasulcate - Reticulate
P \bar{x} = 53 µm EQ \bar{x} = 77 µm

Agalostachys antiacantha (Bertol.) Beer
562 – ICN 19342
Polar view Distal face
Oblate - Anasulcate - Reticulate
P \bar{x} = 53 µm EQ \bar{x} = 77 µm

Bromeliaceae

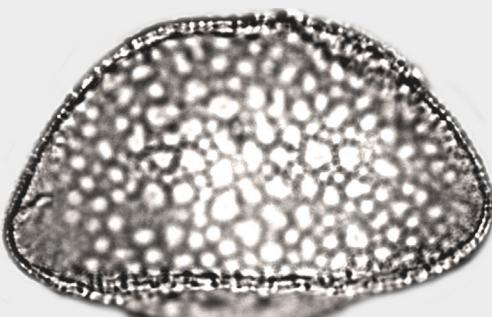

20 µm

Billbergia nutans H. Wendl. ex Regel
555 – ICN 45209
Equatorial view: first plane
Oblate - Anasulcate - Reticulate
P \bar{x} = 36 µm EQ \bar{x} = 69 µm

20 µm

Billbergia nutans H. Wendl. ex Regel
555 – ICN 45209
Equatorial view: second plane
Oblate - Anasulcate - Reticulate
P \bar{x} = 36 µm EQ \bar{x} = 69 µm

20 µm

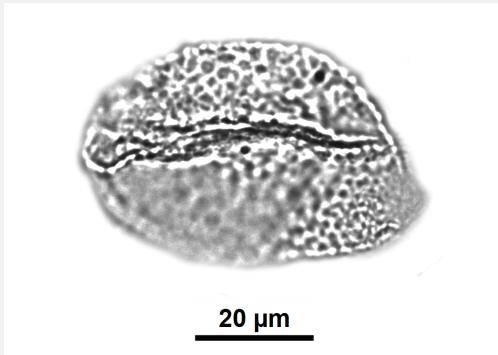

Billbergia nutans H. Wendl. ex Regel
555 – ICN 45209
Equatorial view: third plane
Oblate - Anasulcate - Reticulate
P \bar{x} = 36 µm EQ \bar{x} = 69 µm

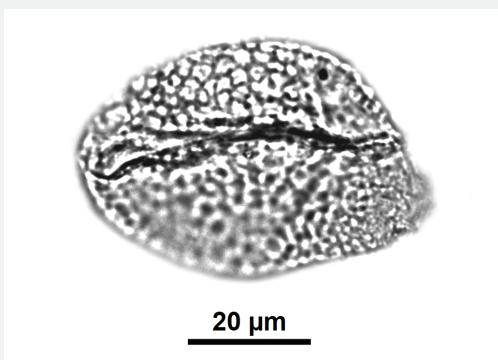

20 µm

Billbergia nutans H. Wendl. ex Regel
555 – ICN 45209
Polar view Distal face
Oblate - Anasulcate - Reticulate
P \bar{x} = 36 µm EQ \bar{x} = 69 µm

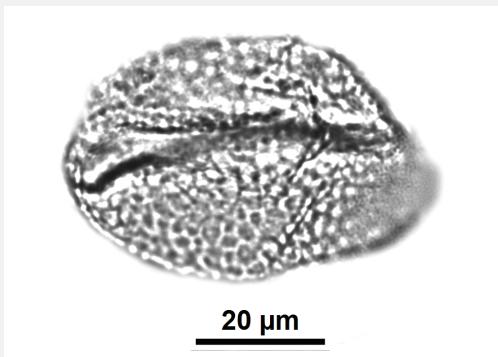

Bromeliaceae

Orthiesia gamosepala (Wittm.) L.B. Sm. & W.J. Kress
554 – ICN 27812
Polar view Distal face: first plane
Oblate - Anasulcate - Reticulate
 $P \bar{x} = 61 \mu m$ EQ $\bar{x} = 83 \mu m$

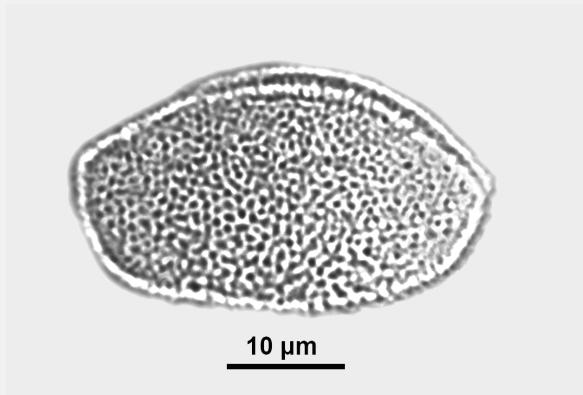

Orthiesia gamosepala (Wittm.) L.B. Sm. & W.J. Kress
554 – ICN 27812
Polar view Distal face: second plane
Oblate - Anasulcate - Reticulate
 $P \bar{x} = 61 \mu m$ EQ $\bar{x} = 83 \mu m$

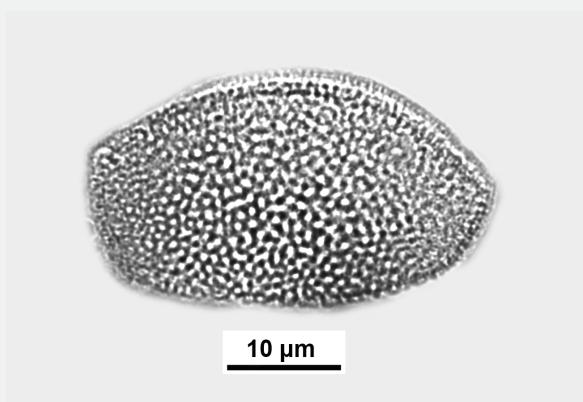

Orthiesia gamosepala (Wittm.) L.B. Sm. & W.J. Kress
554 – ICN 27812
Polar view Distal face: third plane
Oblate - Anasulcate - Reticulate
 $P \bar{x} = 61 \mu m$ EQ $\bar{x} = 83 \mu m$

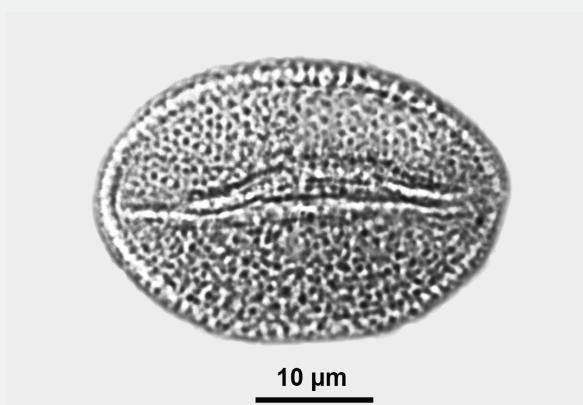

Bromeliaceae

Prionophyllum maritimum (Baker) Mez
563 – ICN 5697
Equatorial view: first plane
Oblate - Anasulcate - Reticulate
P \bar{x} = 25 μm EQ \bar{x} = 41 μm

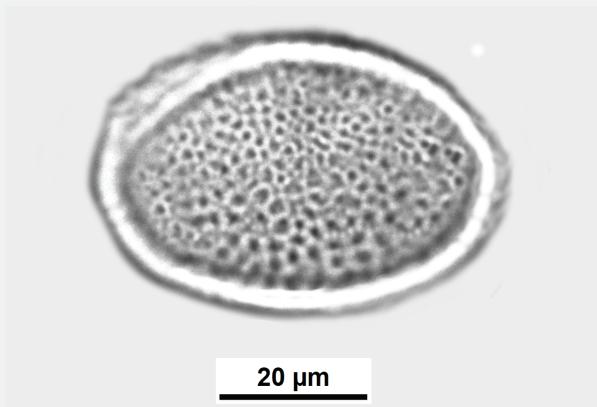

Prionophyllum maritimum (Baker) Mez
563 – ICN 5697
Equatorial view: second plane
Oblate - Anasulcate - Reticulate
P \bar{x} = 25 μm EQ \bar{x} = 41 μm

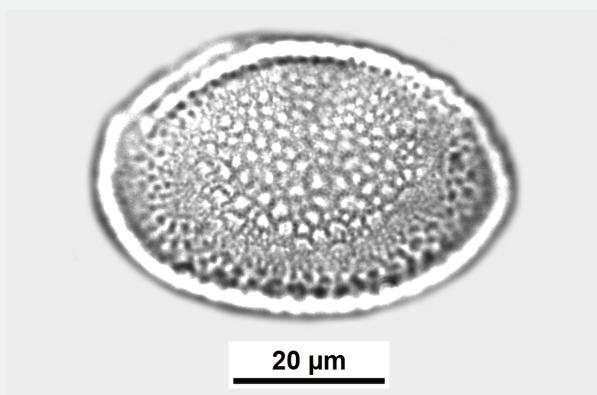

Prionophyllum maritimum (Baker) Mez
563 – ICN 5697
Polar view Distal face
Oblate - Anasulcate - Reticulate
P \bar{x} = 25 μm EQ \bar{x} = 41 μm

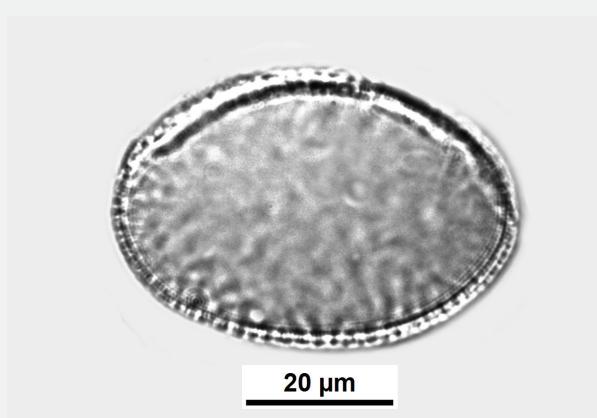

Bromeliaceae

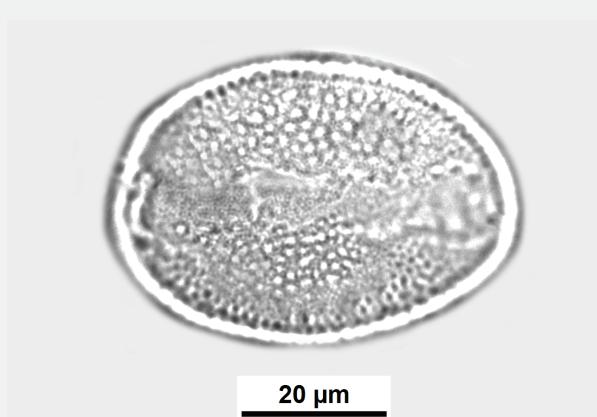

Tillandsia aeranthos (Loisel.) L.B. Sm.
89 – ICN 30798
Equatorial view: first plane
Oblate - Anasulcate - Reticulate
P $\bar{x} = 28 \mu\text{m}$ EQ $\bar{x} = 45 \mu\text{m}$

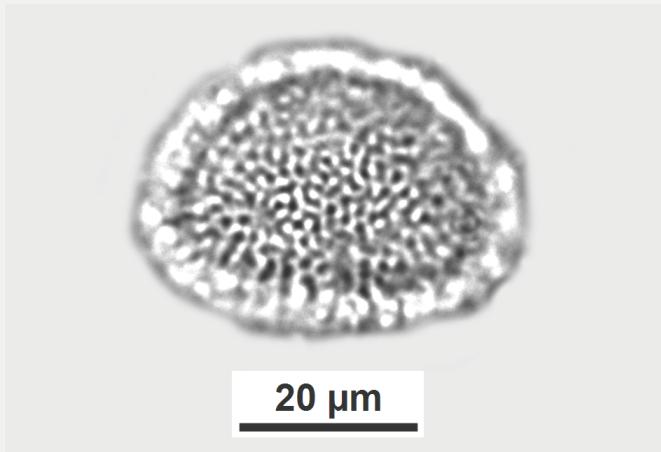

Tillandsia aeranthos (Loisel.) L.B. Sm.
89 – ICN 30798
Equatorial view: second plane
Oblate - Anasulcate - Reticulate
P $\bar{x} = 28 \mu\text{m}$ EQ $\bar{x} = 45 \mu\text{m}$

Tillandsia aeranthos (Loisel.) L.B. Sm.
89 – ICN 30798
Equatorial view: third plane
Oblate - Anasulcate - Reticulate
P $\bar{x} = 28 \mu\text{m}$ EQ $\bar{x} = 45 \mu\text{m}$

Tillandsia aeranthos (Loisel.) L.B. Sm.
89 – ICN 30798
Polar view Distal face
Oblate - Anasulcate - Reticulate
P $\bar{x} = 28 \mu\text{m}$ EQ $\bar{x} = 45 \mu\text{m}$

Bromeliaceae

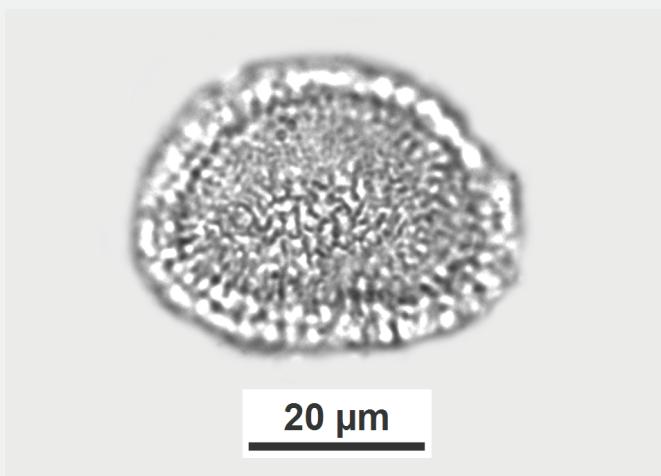

Tillandsia usneoides (L.) L.

923 – ICN 32785

Equatorial view: first plane

Suboblate - Anasulcate - Reticulate

P \bar{x} = 24 μm EQ \bar{x} = 31 μm

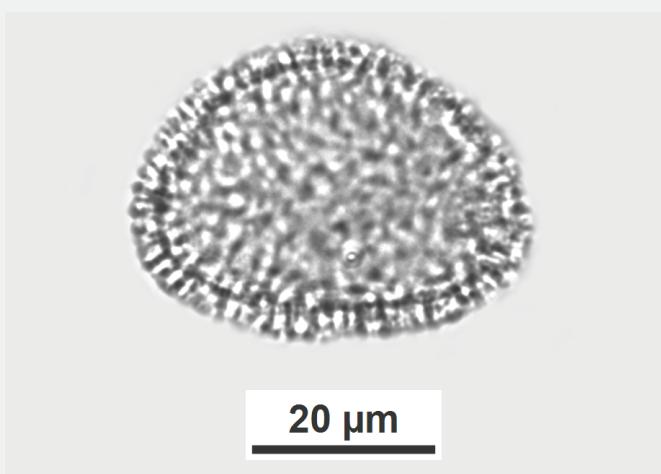

Tillandsia usneoides (L.) L.

923 – ICN 32785

Equatorial view: second plane

Suboblate - Anasulcate - Reticulate

P \bar{x} = 24 μm EQ \bar{x} = 31 μm

Tillandsia usneoides (L.) L.

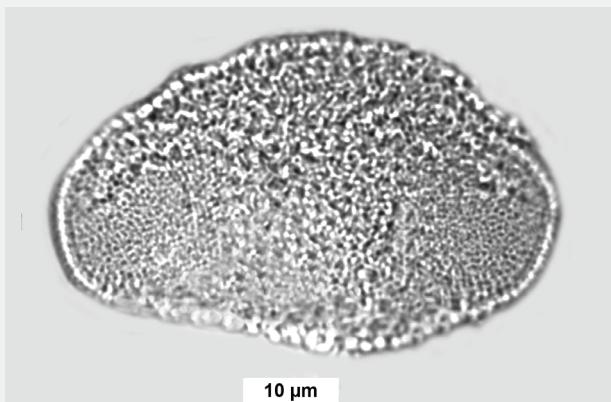

923 – ICN 32785

Equatorial view: third plane

Suboblate - Anasulcate - Reticulate

P \bar{x} = 24 μm EQ \bar{x} = 31 μm

Bromeliaceae

Vriesea flammea L.B. Sm.

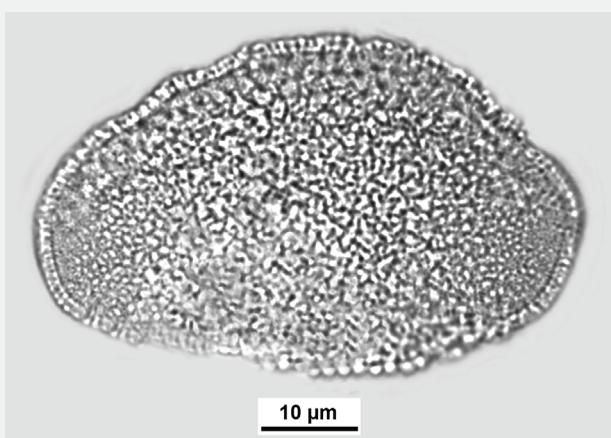

666 – ICN 43279

Equatorial view: first plane

Oblate - Anasulcate - Reticulate

P \bar{x} = 24 µm EQ \bar{x} = 45 µm

Note: The ends of the grain with a reticulum much finer than that of the rest of the surface.

Vriesea flammea L.B. Sm.

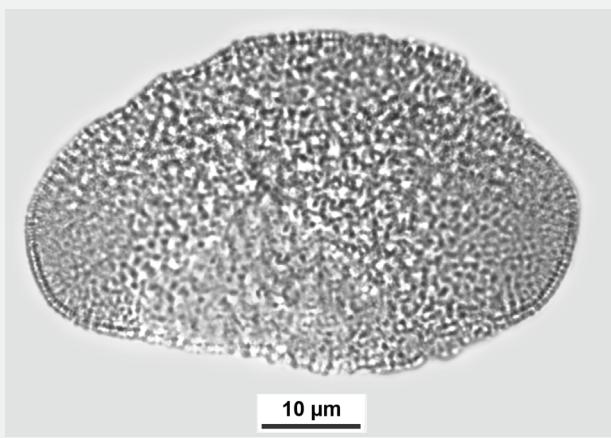

666 – ICN 43279

Equatorial view: second plane

Oblate - Anasulcate - Reticulate

P \bar{x} = 24 µm EQ \bar{x} = 45 µm

Note: The ends of the grain with a reticulum much finer than that of the rest of the surface.

Vriesea flammea L.B. Sm.

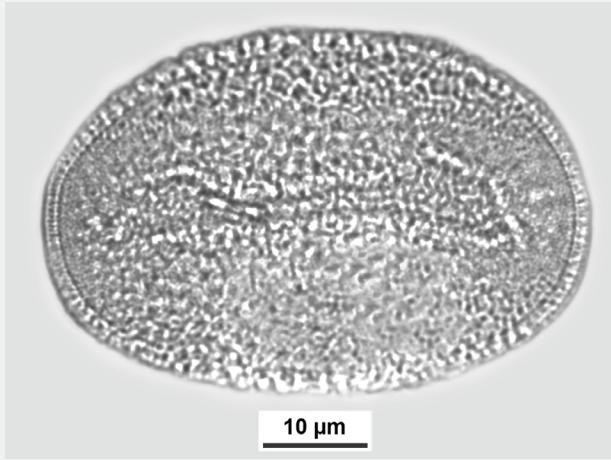

666 – ICN 43279

Equatorial view: third plane

Oblate - Anasulcate - Reticulate

P \bar{x} = 24 µm EQ \bar{x} = 45 µm

Note: The ends of the grain with a reticulum much finer than that of the rest of the surface.

Vriesea flammea L.B. Sm.

666 – ICN 43279

Polar view Distal face

Oblate - Anasulcate - Reticulate

P \bar{x} = 24 µm EQ \bar{x} = 45 µm

Note: The ends of the grain with a reticulum much finer than that of the rest of the surface.

Cyperaceae

Note: The elongate apertures observed in this family were generally faintly marked and microgranulated.

10 μm

Androtrichum trigynum (Spreng.) H. Pfeiff.

68 – ICN 46679

Equatorial view: first plane

Prolate - Ana-ulcerate and three elongate longitudinal
apertures - Scabrate

P $\bar{x} = 33 \mu\text{m}$ EQ $\bar{x} = 21 \mu\text{m}$

10 μm

Androtrichum trigynum (Spreng.) H. Pfeiff.

68 – ICN 46679

Equatorial view: second plane

Prolate - Ana-ulcerate and three elongate longitudinal
apertures - Scabrate

P $\bar{x} = 33 \mu\text{m}$ EQ $\bar{x} = 21 \mu\text{m}$

10 μm

Androtrichum trigynum (Spreng.) H. Pfeiff.

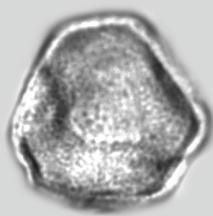

68 – ICN 46679

Equatorial view: third plane

Prolate - Ana-ulcerate and three elongate longitudinal
apertures - Scabrate

P $\bar{x} = 33 \mu\text{m}$ EQ $\bar{x} = 21 \mu\text{m}$

Cyperaceae

20 µm

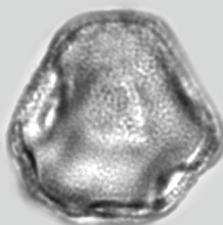

Androtrichum trigynum (Spreng.) H. Pfeiff.

68 – ICN 46679

Polar view Distal face: first plane

Prolate - Ana-ulcerate and three elongate longitudinal
apertures - Scabrate

P $\bar{x} = 33 \mu\text{m}$ EQ $\bar{x} = 21 \mu\text{m}$

20 µm

Androtrichum trigynum (Spreng.) H. Pfeiff.

68 – ICN 46679

Polar view Distal face: second plane

Prolate - Ana-ulcerate and three elongate longitudinal
apertures - Scabrate

P $\bar{x} = 33 \mu\text{m}$ EQ $\bar{x} = 21 \mu\text{m}$

Cyperaceae

Becquerelia muricata (Boeckeler) Nees
968 – ICN 83274
Oblique view: first plane
Spheroidal – two elongate longitudinal
apertures - Scabrate
 $P \bar{x} = 35 \mu\text{m}$ $EQ \bar{x} = 31 \mu\text{m}$

Becquerelia muricata (Boeckeler) Nees
968 – ICN 83274
Oblique view: second plane
Spheroidal – two elongate longitudinal
apertures - Scabrate
 $P \bar{x} = 35 \mu\text{m}$ $EQ \bar{x} = 31 \mu\text{m}$

Cyperaceae

Carex brasiliensis A. St.-Hil.

883 – ICN 68298

Equatorial view: first plane

Subprolate - Ana-ulcerate - Scabrate

P \bar{x} = 50 μm EQ \bar{x} = 41 μm

Carex brasiliensis A. St.-Hil.

883 – ICN 68298

Equatorial view: second plane

Subprolate - Ana-ulcerate - Scabrate

P \bar{x} = 50 μm EQ \bar{x} = 41 μm

Carex brasiliensis A. St.-Hil.

883 – ICN 68298

Equatorial view: third plane

Subprolate - Ana-ulcerate - Scabrate

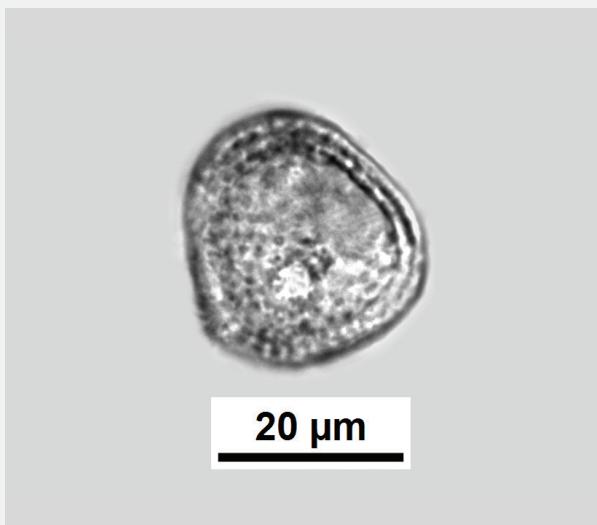

P \bar{x} = 50 μm EQ \bar{x} = 41 μm

Cyperaceae

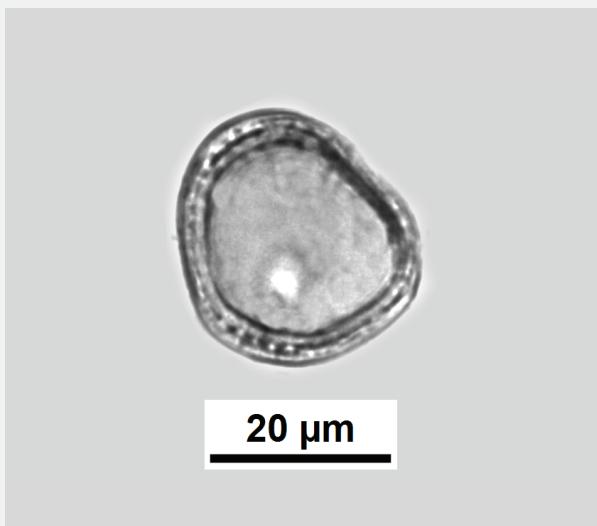

20 µm

Cyperus brasiliensis (Kunth) Bauters
112 – ICN 42695
Oblique polar view: first plane
Subprolate - Ana-ulcerate - Rugulate
 $P \bar{x} = 21 \mu\text{m}$ $EQ \bar{x} = 18 \mu\text{m}$

20 µm

Cyperus brasiliensis (Kunth) Bauters
112 – ICN 42695
Oblique polar view: second plane
Subprolate - Ana-ulcerate - Rugulate
 $P \bar{x} = 21 \mu\text{m}$ $EQ \bar{x} = 18 \mu\text{m}$

20 µm

Cyperus brasiliensis (Kunth) Bauters
112 – ICN 42695
Oblique polar view: third plane
Subprolate - Ana-ulcerate - Rugulate
 $P \bar{x} = 21 \mu\text{m}$ $EQ \bar{x} = 18 \mu\text{m}$

Cyperaceae

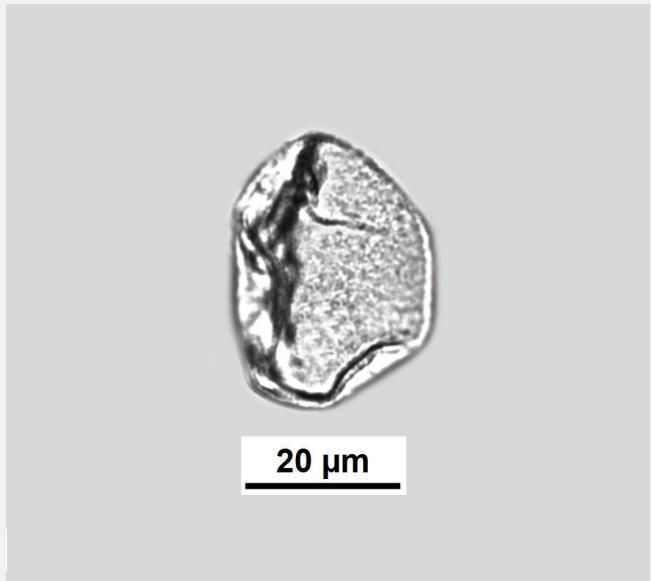

Eleocharis bonariensis Nees

778 – ICN 67441

Equatorial view

Subprolate - Ana-ulcerate - Scabrate

P \bar{x} = 39 μm EQ \bar{x} = 31 μm

Eleocharis geniculata (L.) Roem. & Schult.

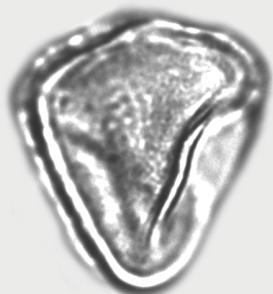

100 – ICN 43806

Equatorial view

Prolate - indeterminate apertures - Scabrate

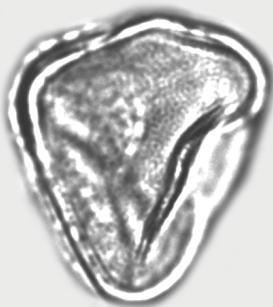

P \bar{x} = 31 μm EQ \bar{x} = 22 μm

Cyperaceae

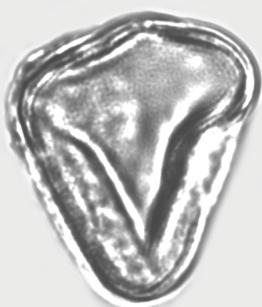

20 µm

Eleocharis maculosa (Vahl) Roem. & Schult.
1037 – ICN 81755
Equatorial view: first plane
Subprolate - Ana-ulcerate and indeterminate
number of elongate longitudinal
apertures - Scabrate
 $P \bar{x} = 48 \mu m$ $EQ \bar{x} = 38 \mu m$

20 µm

Eleocharis maculosa (Vahl) Roem. & Schult.
1037 – ICN 81755
Equatorial view: second plane
Subprolate - Ana-ulcerate and indeterminate
number of elongate longitudinal
apertures - Scabrate
 $P \bar{x} = 48 \mu m$ $EQ \bar{x} = 38 \mu m$

20 µm

Eleocharis maculosa (Vahl) Roem. & Schult.
1037 – ICN 81755
Equatorial view: third plane
Subprolate - Ana-ulcerate and indeterminate
number of elongate longitudinal
apertures - Scabrate
 $P \bar{x} = 48 \mu m$ $EQ \bar{x} = 38 \mu m$

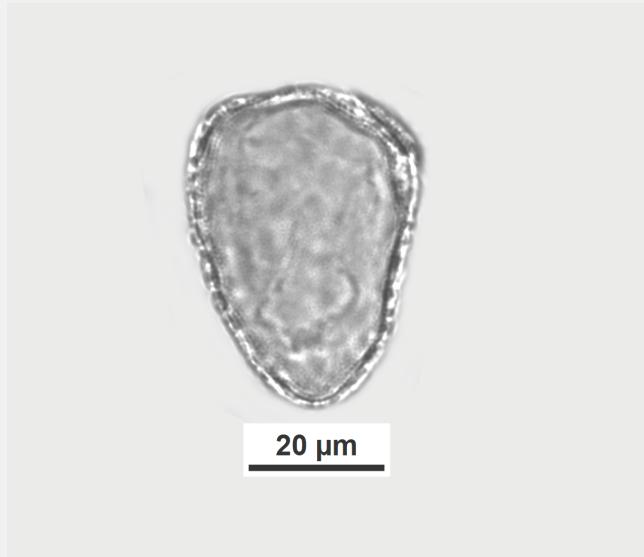

Cyperaceae

Eleocharis nudipes (Kunth) Palla
1363 – ICN 119048
Equatorial view: first plane
Prolate - Ana-ulcerate
and three elongate longitudinal
apertures - Rugulate
 $P \bar{x} = 38 \mu m$ $EQ \bar{x} = 25 \mu m$

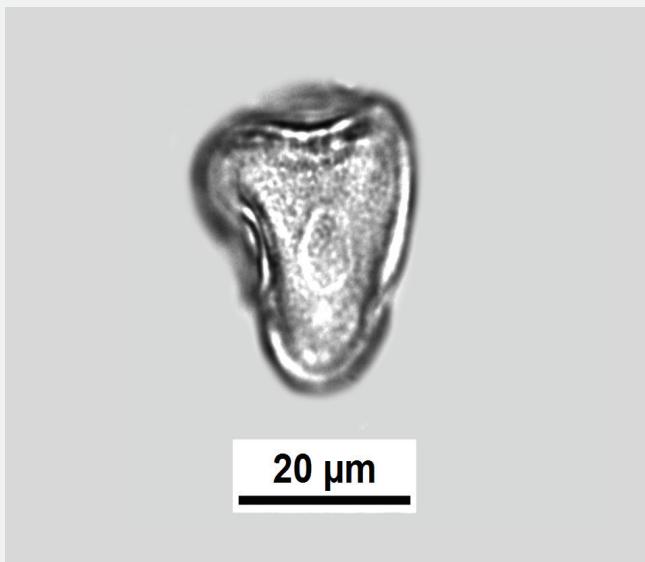

Eleocharis nudipes (Kunth) Palla
1363 – ICN 119048
Equatorial view: second plane
Prolate - Ana-ulcerate
and three elongate longitudinal
apertures - Rugulate
 $P \bar{x} = 38 \mu m$ $EQ \bar{x} = 25 \mu m$

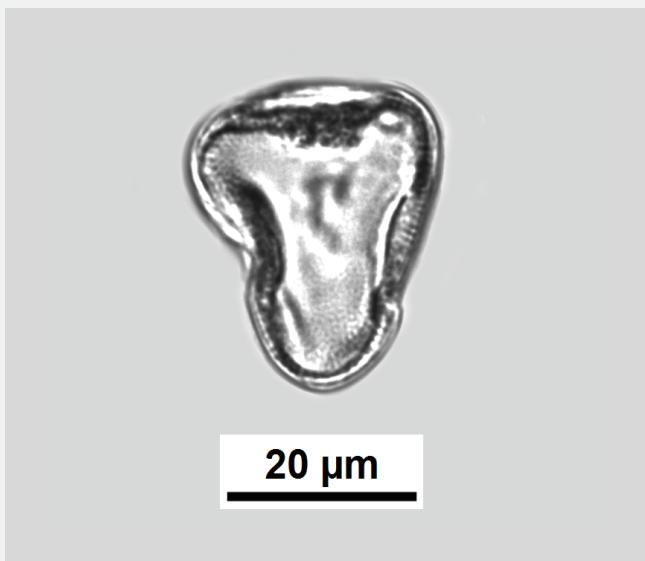

Eleocharis nudipes (Kunth) Palla
1363 – ICN 119048
Equatorial view: third plane
Prolate - Ana-ulcerate
and three elongate longitudinal
apertures - Rugulate
 $P \bar{x} = 38 \mu m$ $EQ \bar{x} = 25 \mu m$

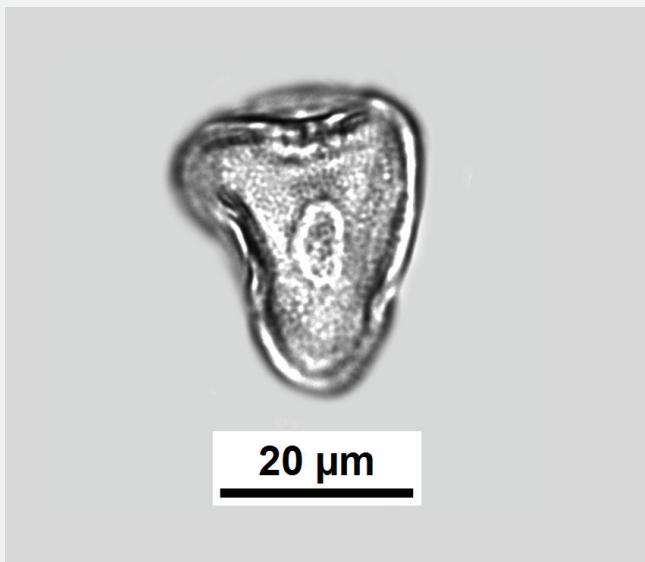

Cyperaceae

Eleocharis obtusa (Willd.) Schult.
1036 – ICN 9731
Equatorial view: first plane
Subprolate - Ana-ulcerate and four elongate
longitudinal apertures - Scabrate
P \bar{x} = 42 µm EQ \bar{x} = 32 µm

Eleocharis obtusa (Willd.) Schult.
1036 – ICN 9731
Equatorial view: second plane
Subprolate - Ana-ulcerate and four elongate
longitudinal apertures - Scabrate
P \bar{x} = 42 µm EQ \bar{x} = 32 µm

Eleocharis obtusa (Willd.) Schult.
1036 – ICN 9731
Equatorial view: third plane
Subprolate - Ana-ulcerate and four elongate
longitudinal apertures - Scabrate
P \bar{x} = 42 µm EQ \bar{x} = 32 µm

Cyperaceae

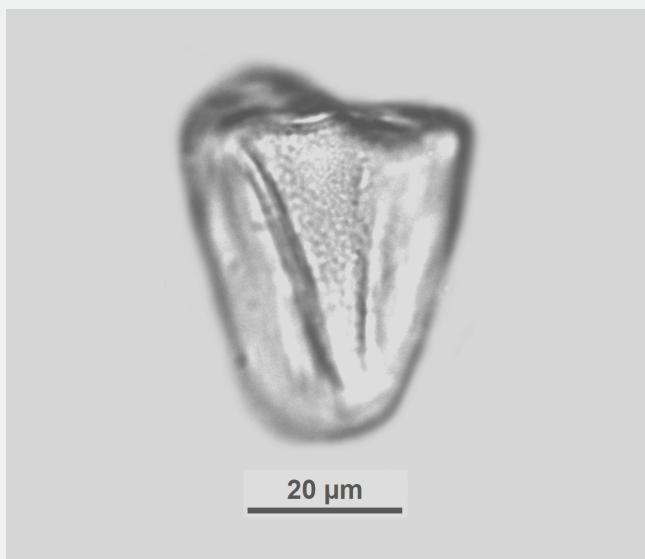

Fimbristylis complanata (Retz.) Link
102 – ICN 45852
Equatorial view: first plane
Subprolate – Ana-ulcerate and
indeterminate longitudinal
apertures - Rugulate
P \bar{x} = 24 μm EQ \bar{x} = 19 μm

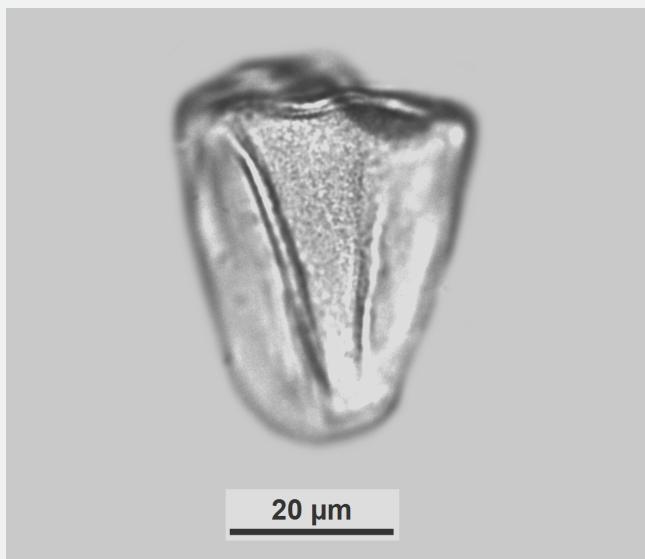

Fimbristylis complanata (Retz.) Link
102 – ICN 45852
Equatorial view: second plane
Subprolate – Ana-ulcerate and
indeterminate longitudinal
apertures - Rugulate
P \bar{x} = 24 μm EQ \bar{x} = 19 μm

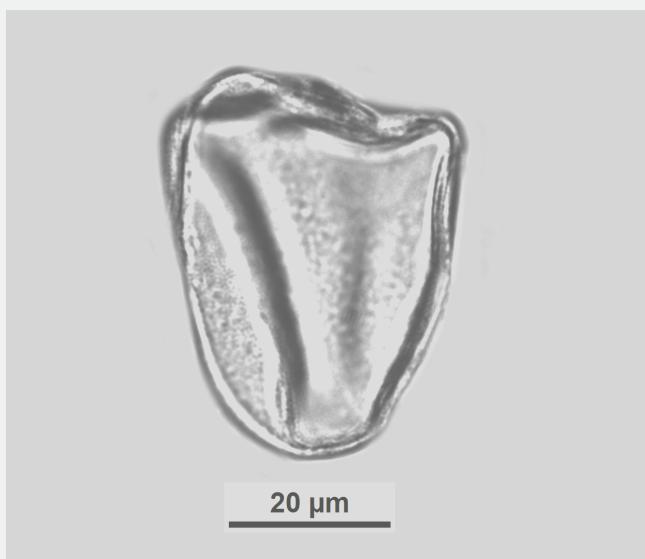

Cyperaceae

Fuirena robusta Kunth
1021 – ICN 85622
Equatorial view: first plane
Subprolate - Ana-ulcerate and
four elongate longitudinal
apertures - Scabrate
P \bar{x} = 47 µm EQ \bar{x} = 37 µm

Fuirena robusta Kunth
1021 – ICN 85622
Equatorial view: second plane
Subprolate - Ana-ulcerate and
four elongate longitudinal
apertures - Scabrate
P \bar{x} = 47 µm EQ \bar{x} = 37 µm

Fuirena robusta Kunth
1021 – ICN 85622
Equatorial view: third plane
Subprolate - Ana-ulcerate and
four elongate longitudinal
apertures - Scabrate
P \bar{x} = 47 µm EQ \bar{x} = 37 µm

Cyperaceae

20 μm

Papyrus giganteus (Vahl) Schrad. ex Nees
09 – ICN 5566
Equatorial view: first plane
Subprolate - Ana-ulcerate and four
elongate longitudinal apertures - Scabrate
 $P \bar{x} = 42 \mu\text{m}$ $EQ \bar{x} = 32 \mu\text{m}$

20 μm

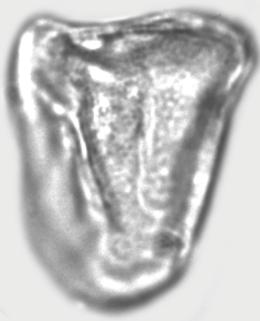

Papyrus giganteus (Vahl) Schrad. ex Nees
09 – ICN 5566
Equatorial view: second plane
Subprolate - Ana-ulcerate and four
elongate longitudinal apertures - Scabrate
 $P \bar{x} = 42 \mu\text{m}$ $EQ \bar{x} = 32 \mu\text{m}$

20 μm

Papyrus giganteus (Vahl) Schrad. ex Nees
09 – ICN 5566
Equatorial view: third plane
Subprolate - Ana-ulcerate and four
elongate longitudinal apertures - Scabrate
 $P \bar{x} = 42 \mu\text{m}$ $EQ \bar{x} = 32 \mu\text{m}$

Cyperaceae

20 μm

Pycreus polystachyos (Rottb.) P. Beauv.
724 – ICN 49906
Equatorial view: first plane
Spheroidal - Ana-ulcerate and four elongate
longitudinal apertures - Scabrate
 $P \bar{x} = 30 \mu m$ EQ $\bar{x} = 29 \mu m$

20 μm

Pycreus polystachyos (Rottb.) P. Beauv.
724 – ICN 49906
Equatorial view: second plane
Spheroidal - Ana-ulcerate and four elongate
longitudinal apertures - Scabrate
 $P \bar{x} = 30 \mu m$ EQ $\bar{x} = 29 \mu m$

20 μm

Pycreus polystachyos (Rottb.) P. Beauv.
724 – ICN 49906
Equatorial view: third plane
Spheroidal - Ana-ulcerate and four elongate
longitudinal apertures - Scabrate
 $P \bar{x} = 30 \mu m$ EQ $\bar{x} = 29 \mu m$

Cyperaceae

10 µm

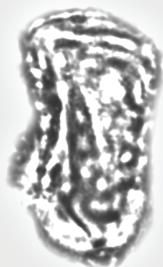

Rhynchospora corymbosa (L.) Britton

103 – ICN 8790

Equatorial view

Prolate - Ana-ulcerate and
indeterminate longitudinal
apertures - Scabrate

P $\bar{x} = 28 \mu\text{m}$ EQ $\bar{x} = 18 \mu\text{m}$

10 µm

Rhynchospora holoschoenoides (Rich.) Herter

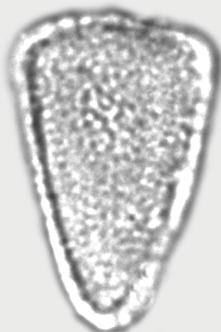

104 – ICN 9068

Equatorial view

Prolate - indeterminate apertures - Granulate

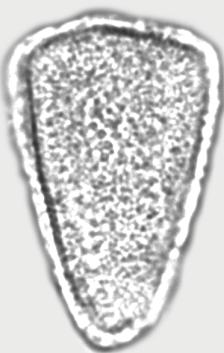

P $\bar{x} = 26 \mu\text{m}$ EQ $\bar{x} = 18 \mu\text{m}$

Cyperaceae

10 µm

Rhynchospora marisculus Lindl. ex Nees
760 – ICN 9136
Equatorial view: first plane
Prolate - Ana-ulcerate and indeterminate
longitudinal apertures - Rugulate
 $P \bar{x} = 22 \mu m$ EQ $\bar{x} = 15 \mu m$

10 µm

Rhynchospora marisculus Lindl. ex Nees
760 – ICN 9136
Equatorial view: second plane
Prolate - Ana-ulcerate and indeterminate
longitudinal apertures - Rugulate
 $P \bar{x} = 22 \mu m$ EQ $\bar{x} = 15 \mu m$

10 µm

Rhynchospora marisculus Lindl. ex Nees
760 – ICN 9136
Equatorial view: third plane
Prolate - Ana-ulcerate and indeterminate
longitudinal apertures - Rugulate
 $P \bar{x} = 22 \mu m$ EQ $\bar{x} = 15 \mu m$

Cyperaceae

10 µm

Rhynchospora panicoides Nees ex L.B. Sm.

105 – ICN 21787

Equatorial view

Spheroidal – Ana-ulcerate and

indeterminate longitudinal

apertures - Psilate

P \bar{x} = 16 µm EQ \bar{x} = 14 µm

10 µm

Rhynchospora setigera Griseb.

107 – ICN 8550

Equatorial view: first plane

Subprolate – Ana-ulcerate and four elongate
longitudinal apertures - Scabrate

P \bar{x} = 30 µm EQ \bar{x} = 24 µm

10 µm

Rhynchospora setigera Griseb.

107 – ICN 8550

Equatorial view: second plane

Subprolate – Ana-ulcerate and four elongate
longitudinal apertures - Scabrate

P \bar{x} = 30 µm EQ \bar{x} = 24 µm

10 µm

Rhynchospora setigera Griseb.

107 – ICN 8550

Equatorial view: third plane

Subprolate – Ana-ulcerate and four elongate
longitudinal apertures - Scabrate

P \bar{x} = 30 µm EQ \bar{x} = 24 µm

Cyperaceae

20 µm

Schoenoplectus americanus (Pers.)

Volkart ex Schinz & R. Keller

1034 – ICN 60101

Equatorial view: first plane

Prolate - Ana-ulcerate and four elongate
longitudinal apertures - Scabrate

P $\bar{x} = 52 \mu\text{m}$ EQ $\bar{x} = 32 \mu\text{m}$

20 µm

Schoenoplectus americanus (Pers.)

Volkart ex Schinz & R. Keller

1034 – ICN 60101

Equatorial view: second plane

Prolate - Ana-ulcerate and four elongate
longitudinal apertures - Scabrate

P $\bar{x} = 52 \mu\text{m}$ EQ $\bar{x} = 32 \mu\text{m}$

20 µm

Schoenoplectus americanus (Pers.)

Volkart ex Schinz & R. Keller

1034 – ICN 60101

Equatorial view: third plane

Prolate - Ana-ulcerate and four elongate
longitudinal apertures - Scabrate

P $\bar{x} = 52 \mu\text{m}$ EQ $\bar{x} = 32 \mu\text{m}$

Cyperaceae

Scirpus californicus (C.A. Mey.) Steud.
736 – ICN 9145
Equatorial view: first plane
Subprolate - Ana-ulcerate and four elongate
longitudinal apertures - Scabrate
 $P \bar{x} = 24 \mu m$ EQ $\bar{x} = 18 \mu m$

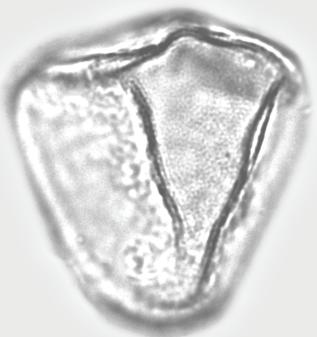

Scirpus californicus (C.A. Mey.) Steud.
736 – ICN 9145
Equatorial view: second plane
Subprolate - Ana-ulcerate and four elongate
longitudinal apertures - Scabrate
 $P \bar{x} = 24 \mu m$ EQ $\bar{x} = 18 \mu m$

Scirpus californicus (C.A. Mey.) Steud.
736 – ICN 9145
Equatorial view: third plane
Subprolate - Ana-ulcerate and four elongate
longitudinal apertures - Scabrate
 $P \bar{x} = 24 \mu m$ EQ $\bar{x} = 18 \mu m$

Cyperaceae

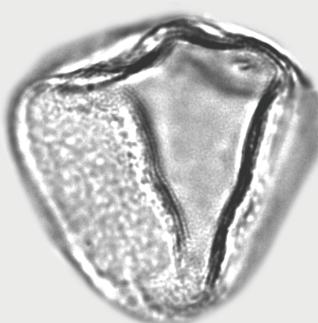

Scleria hirtella (Sw.) J.F. Gmel.

951 – ICN 61584

Equatorial view: first plane

Spheroidal - Ana-ulcerate and indeterminate
longitudinal apertures - Scabrate

P \bar{x} = 38 μm EQ \bar{x} = 35 μm

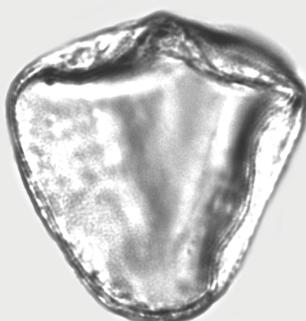

Scleria hirtella (Sw.) J.F. Gmel.

951 – ICN 61584

Equatorial view: second plane

Spheroidal - Ana-ulcerate and indeterminate
longitudinal apertures - Scabrate

P \bar{x} = 38 μm EQ \bar{x} = 35 μm

Scleria hirtella (Sw.) J.F. Gmel.

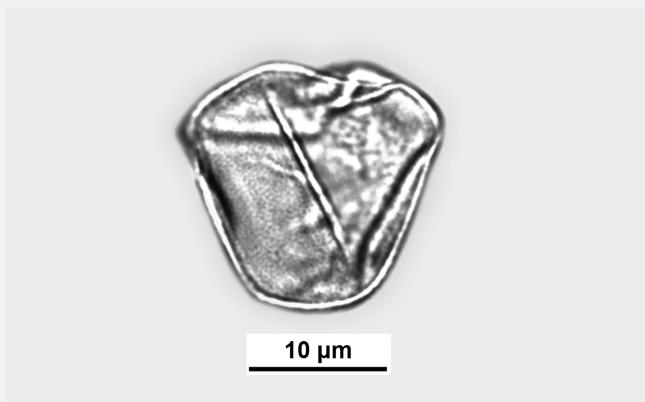

951 – ICN 61584

Equatorial view: third plane

Spheroidal - Ana-ulcerate and indeterminate
longitudinal apertures - Scabrate

P \bar{x} = 38 μm EQ \bar{x} = 35 μm

Cyperaceae

Scleria uleana Boeckeler

756 – ICN 28219

Equatorial view

Spheroidal - Ana-ulcerate and
indeterminate longitudinal
apertures - Scabrate

P $\bar{x} = 21 \mu\text{m}$ EQ $\bar{x} = 19 \mu\text{m}$

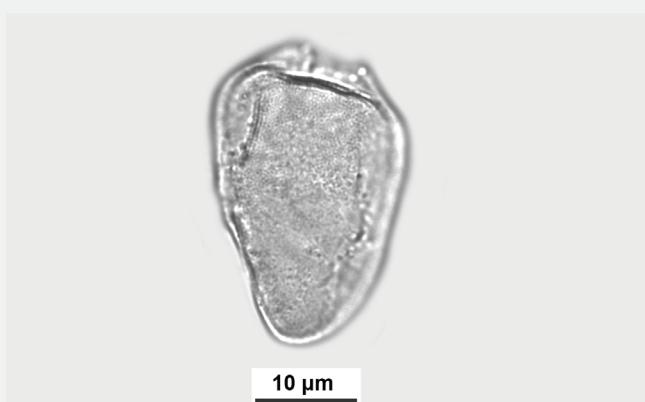

Uncinia sellowiana (Schltdl.) Nees

109 – ICN 46218

Equatorial view: first plane

Prolate – Ana-ulcerate and three
elongate longitudinal
apertures - Scabrate

P $\bar{x} = 39 \mu\text{m}$ EQ $\bar{x} = 29 \mu\text{m}$

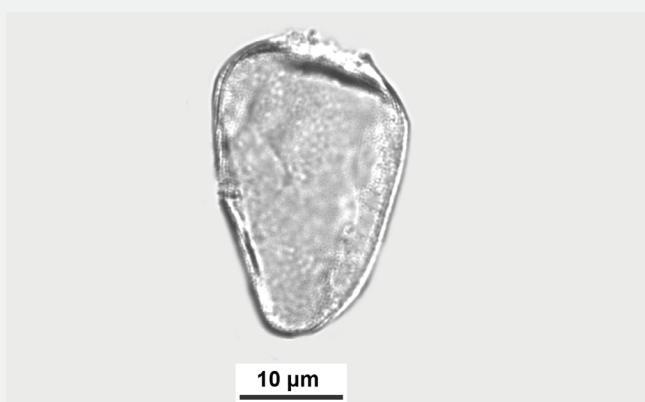

Uncinia sellowiana (Schltdl.) Nees

109 – ICN 46218

Equatorial view: second plane

Prolate – Ana-ulcerate and three
elongate longitudinal
apertures - Scabrate

P $\bar{x} = 39 \mu\text{m}$ EQ $\bar{x} = 29 \mu\text{m}$

Uncinia sellowiana (Schltdl.) Nees

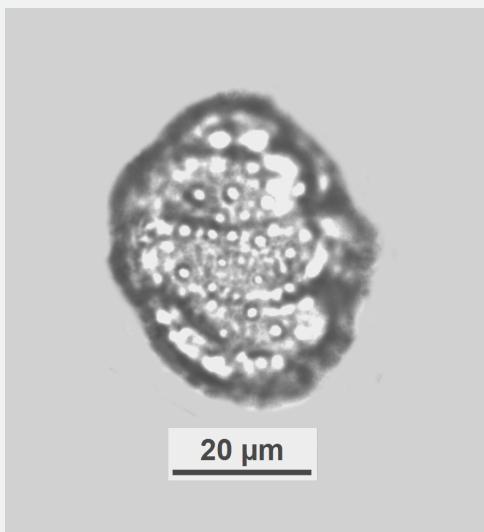

109 – ICN 46218

Equatorial view: third plane

Prolate – Ana-ulcerate and three
elongate longitudinal
apertures - Scabrate

P $\bar{x} = 39 \mu\text{m}$ EQ $\bar{x} = 29 \mu\text{m}$

Eriocaulaceae

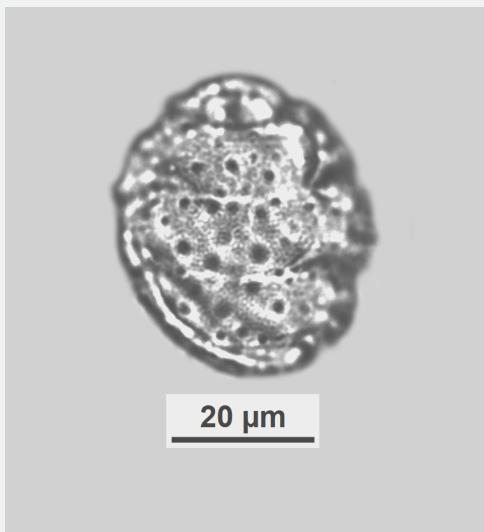

Eriocaulon gomphrenoides Knuth

1331 – ICN 119039

Equatorial view: first plane

Prolate spheroidal - Spiraperturate - Microechinate

P \bar{x} = 34 µm EQ \bar{x} = 30 µm

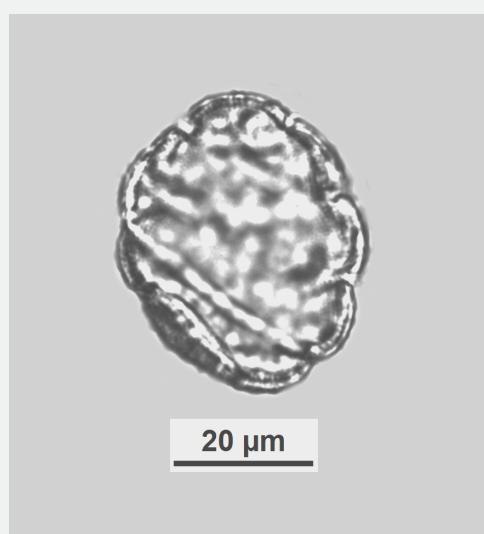

Eriocaulon gomphrenoides Knuth

1331 – ICN 119039

Equatorial view: second plane

Prolate spheroidal - Spiraperturate - Microechinate

P \bar{x} = 34 µm EQ \bar{x} = 30 µm

Eriocaulon gomphrenoides Knuth

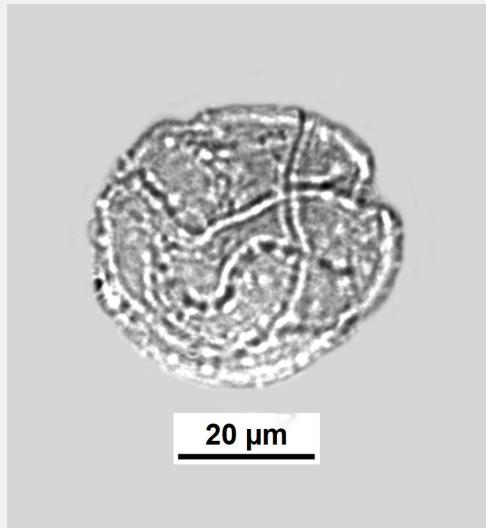

1331 – ICN 119039

Equatorial view: third plane

Prolate spheroidal - Spiraperturate - Microechinate

P \bar{x} = 34 µm EQ \bar{x} = 30 µm

Eriocaulaceae

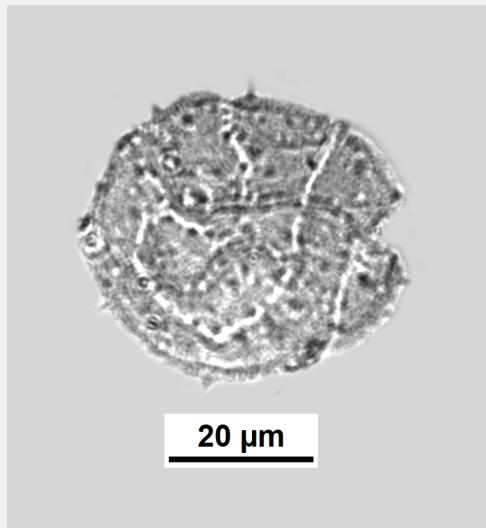

Eriocaulon ligulatum (Vell.) L.B. Sm.

788 – ICN 53492

Polar view: first plane

Subprolate - Spiraperturate - Microechinate

P \bar{x} = 33 μ m EQ \bar{x} = 26 μ m

Eriocaulon ligulatum (Vell.) L.B. Sm.

788 – ICN 53492

Polar view: second plane

Subprolate - Spiraperturate - Microechinate

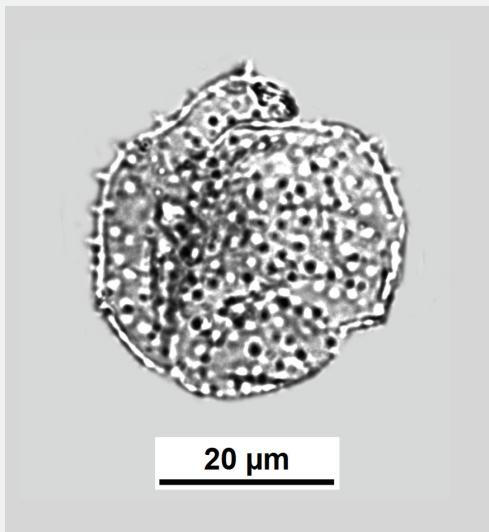

P \bar{x} = 33 μ m EQ \bar{x} = 26 μ m

Eriocaulaceae

MONOCOTS, COMMELINIDS, POALES

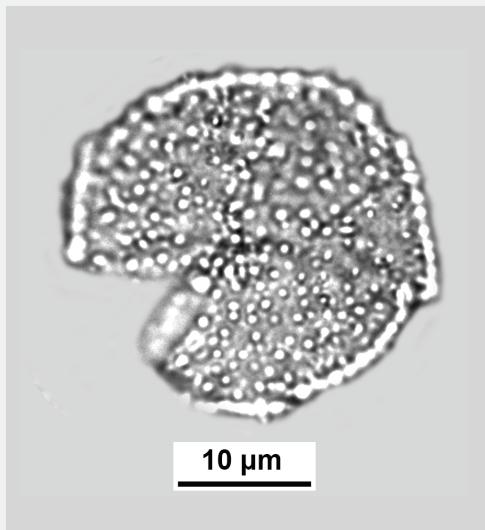

Leiothrix flavescens (Bong.) Ruhland
787 – ICN 51495
Equatorial view: first plane
Subprolate - Spiraperturate - Microechinate
P \bar{x} = 31 μm EQ \bar{x} = 26 μm

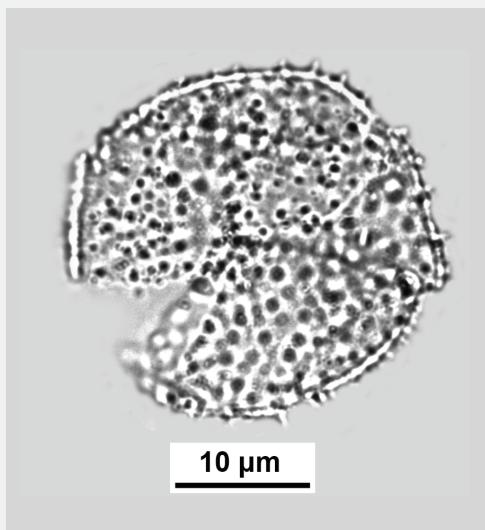

Leiothrix flavescens (Bong.) Ruhland
787 – ICN 51495
Equatorial view: second plane
Subprolate - Spiraperturate - Microechinate
P \bar{x} = 31 μm EQ \bar{x} = 26 μm

Eriocaulaceae

Paepalanthus catharinae Ruhland
122 – ICN 7398
Oblique view: first plane
Subprolate - Spiraperturate - Microechinate
 $P \bar{x} = 30 \mu m$ EQ $\bar{x} = 26 \mu m$

Paepalanthus catharinae Ruhland
122 – ICN 7398
Oblique view: first plane
Subprolate - Spiraperturate - Microechinate
 $P \bar{x} = 30 \mu m$ EQ $\bar{x} = 26 \mu m$

Poaceae

Bromus unioloides Kunth

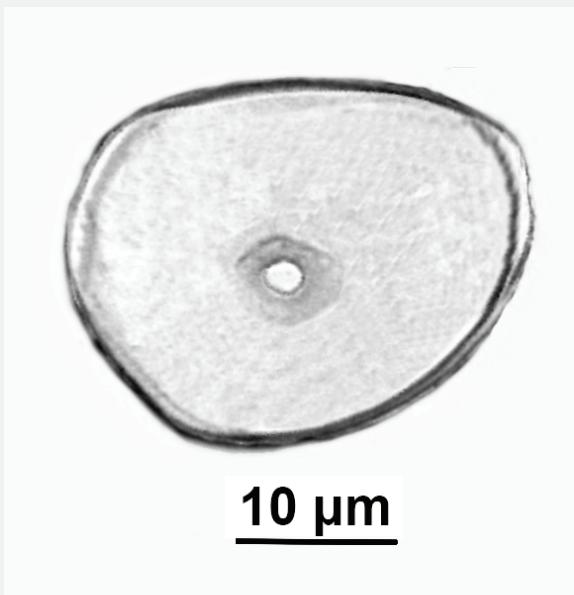

84 – ICN 32527

Equatorial view

Spheroidal – Ana-ulcerate - Psilate

P \bar{x} = 38 μm EQ \bar{x} = 34 μm

Note: Ulcus slightly protruding and crassimarginate.
This morphology is characteristic of the family.

Bromus unioloides Kunth

84 – ICN 32527

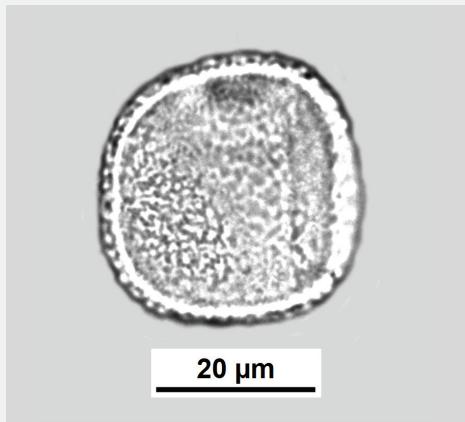

Polar view Distal face

Spheroidal – Ana-ulcerate - Psilate

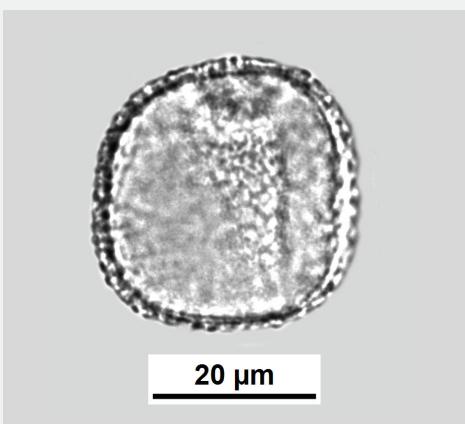

P \bar{x} = 38 μm EQ \bar{x} = 34 μm

Note: Ulcus slightly protruding and crassimarginate.
This morphology is characteristic of the family.

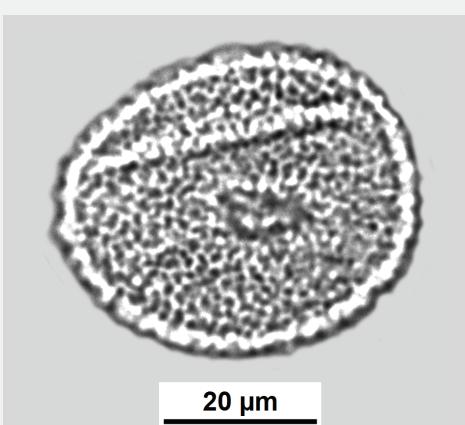

Thyphaceae

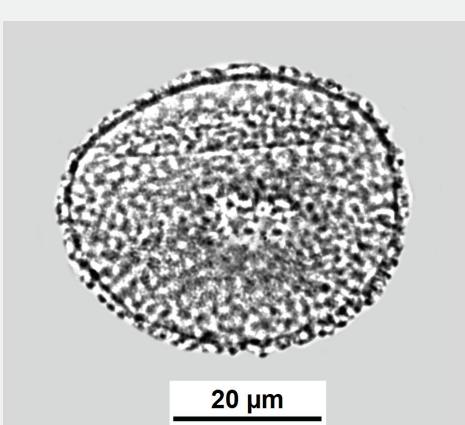

Typha angustifolia L.
809 – ICN 53651
Equatorial view: first plane
Spheroidal - Ana-ulcerate - Rugulate
P \bar{x} = 28 µm EQ \bar{x} = 27 µm

Typha angustifolia L.
809 – ICN 53651
Equatorial view: second plane
Spheroidal - Ana-ulcerate - Rugulate
P \bar{x} = 28 µm EQ \bar{x} = 27 µm

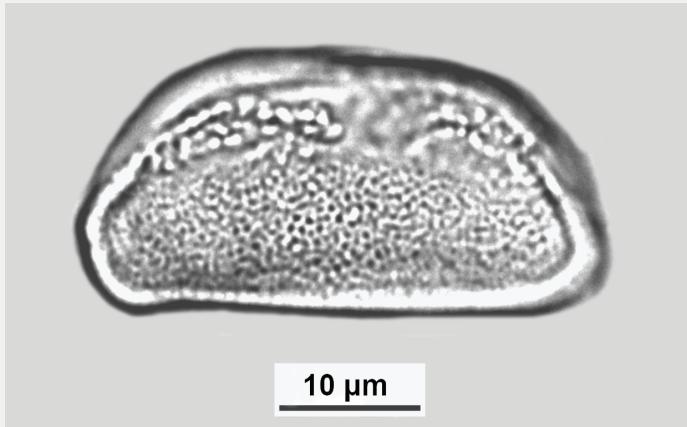

Typha angustifolia L.
809 – ICN 53651
Polar view Distal face: first plane
Spheroidal - Ana-ulcerate - Rugulate
P \bar{x} = 28 µm EQ \bar{x} = 27 µm

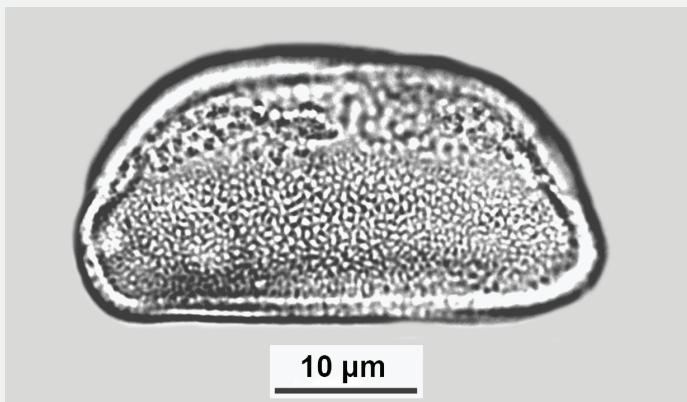

Typha angustifolia L.
809 – ICN 53651
Polar view Distal face: second plane
Spheroidal - Ana-ulcerate - Rugulate
P \bar{x} = 28 µm EQ \bar{x} = 27 µm

Xyridaceae

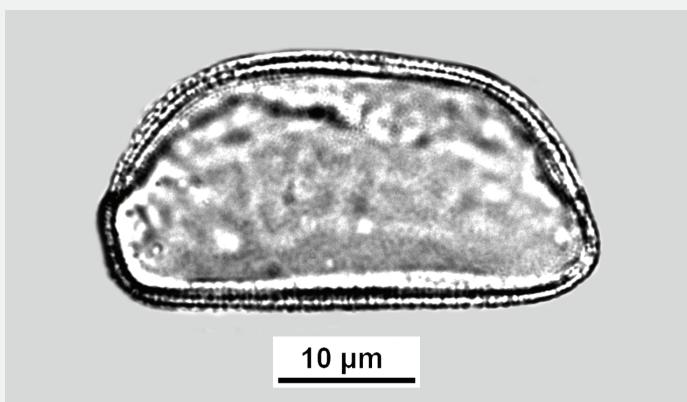

10 µm

Xyris guaranitica Malme
447 – ICN 458
Equatorial view: first plane
Oblate - Sulculate - Reticulate
P $\bar{x} = 27 \mu\text{m}$ EQ $\bar{x} = 48 \mu\text{m}$

10 µm

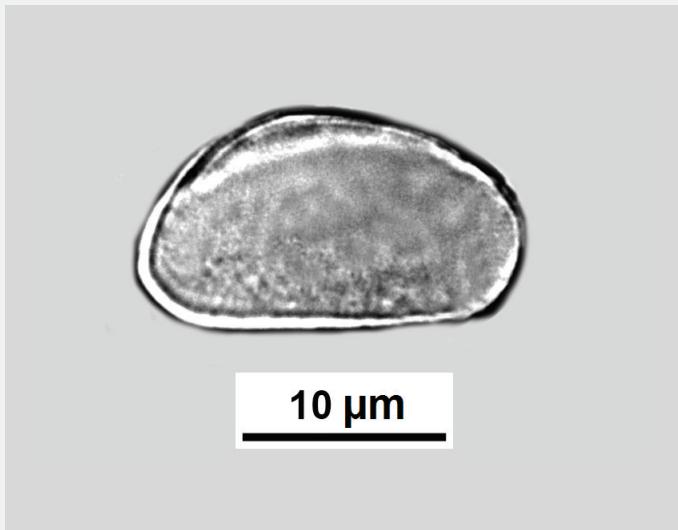

Xyris guaranitica Malme
447 – ICN 458
Equatorial view: second plane
Oblate - Sulculate - Reticulate
P $\bar{x} = 27 \mu\text{m}$ EQ $\bar{x} = 48 \mu\text{m}$

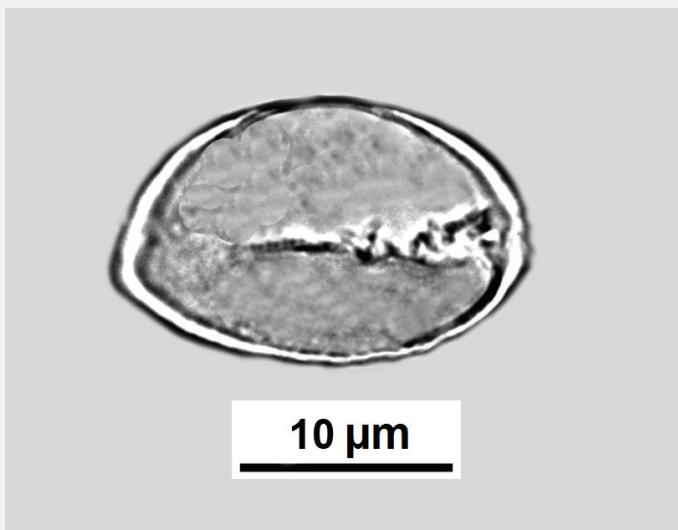

10 µm

Xyris guaranitica Malme
447 – ICN 458
Equatorial view: third plane
Oblate - Sulculate - Reticulate
P $\bar{x} = 27 \mu\text{m}$ EQ $\bar{x} = 48 \mu\text{m}$

Commelinaceae

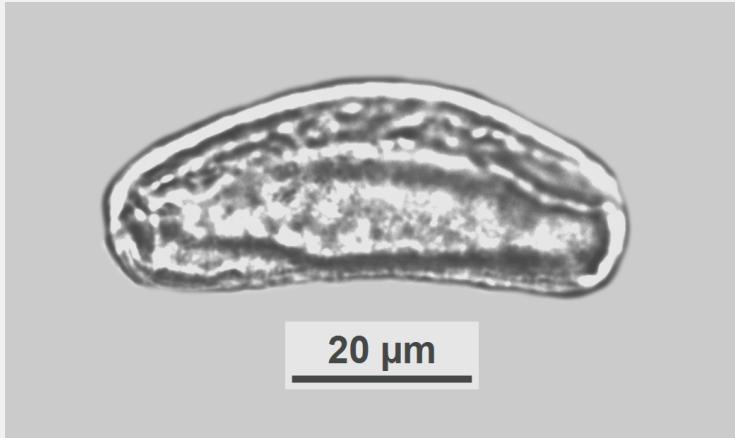

Tradescantia crassula Link & Otto
303 – ICN 2025
Equatorial view
Oblate - Anasulcate - Psilate
P \bar{x} = 19 μm EQ \bar{x} = 27 μm

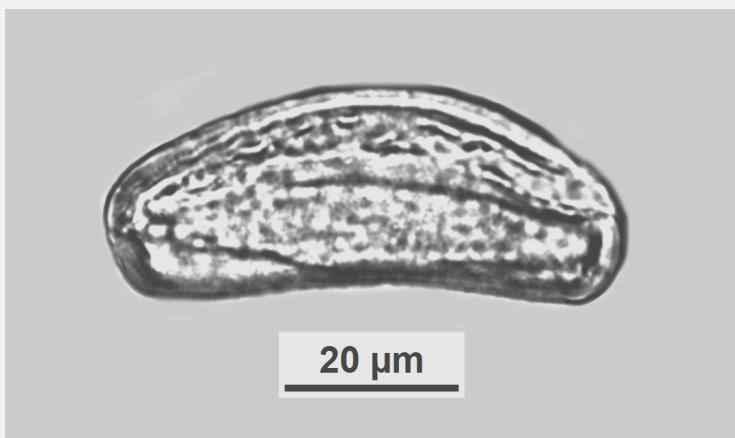

Tradescantia crassula Link & Otto
303 – ICN 2025
Polar view Distal face
Oblate - Anasulcate - Psilate
P \bar{x} = 19 μm EQ \bar{x} = 27 μm

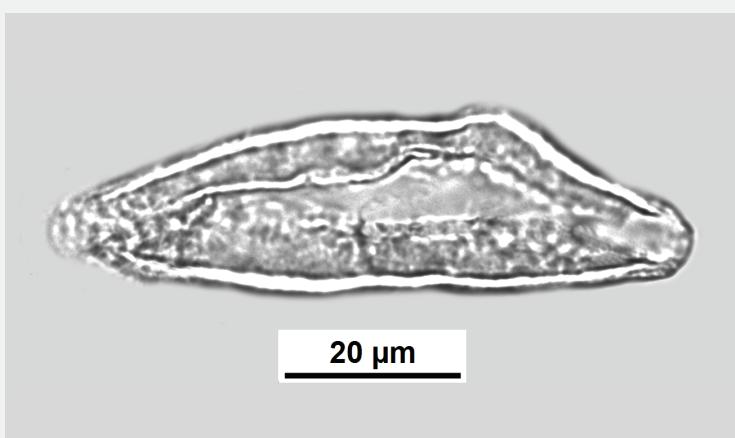

Pontederiaceae

Eichhornia azurea (Sw.) Kunth
13 – ICN 30740
Equatorial view: first plane
Peroblate - 2-Sulculate - Reticulate
P \bar{x} = 25 µm EQ \bar{x} = 60 µm

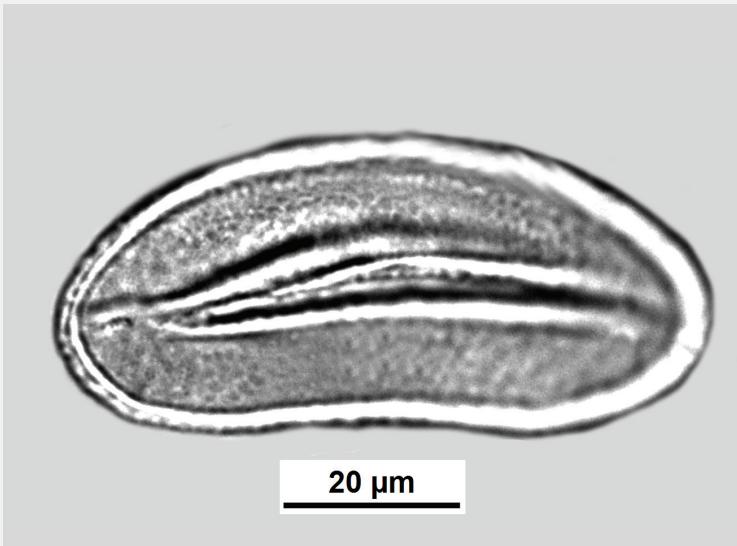

Eichhornia azurea (Sw.) Kunth
13 – ICN 30740
Equatorial view: second plane
Peroblate - 2-Sulculate - Reticulate
P \bar{x} = 25 µm EQ \bar{x} = 60 µm

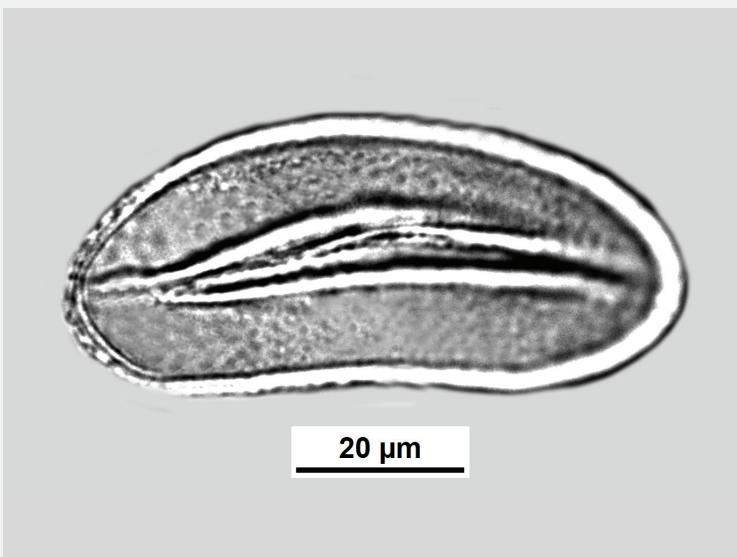

Eichhornia crassipes (Mart.) Solms
1038 – ICN 53743
Equatorial view
Peroblate - 2-Sulculate – Reticulate
P \bar{x} = 20 µm EQ \bar{x} = 70 µm

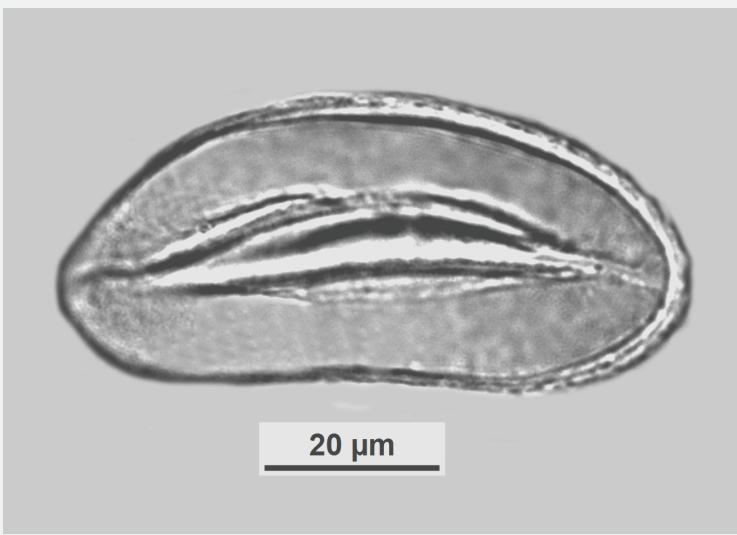

Pontederiaceae

Pontederia cordata L.
70 – ICN 46681
Equatorial view: first plane
Peroblate - 2-Sulculate - Reticulate
P \bar{x} = 24 μm EQ \bar{x} = 51 μm

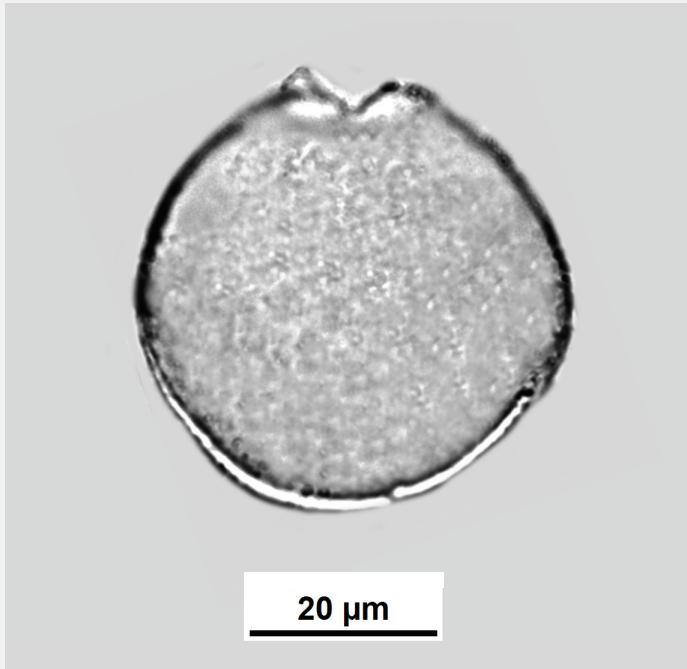

Pontederia cordata L.
70 – ICN 46681
Equatorial view: second plane
Peroblate - 2-Sulculate - Reticulate
P \bar{x} = 24 μm EQ \bar{x} = 51 μm

Pontederia cordata L.
70 – ICN 46681
Equatorial view: third plane
Peroblate - 2-Sulculate - Reticulate
P \bar{x} = 24 μm EQ \bar{x} = 51 μm

Heliconiaceae

Heliconia velloziana Emygdio

27 – ICN 16366

Equatorial view

Spheroidal - Ana-ulceroidate

Microgranulate

diameter $\bar{x} = 49 \mu\text{m}$

Note: Surface with sparse granules.
